

Assistive Technology Enabled Care (ATEC) Resident Design Group

We're working on a project to embed new assistive technology into our care and support services, helping residents live happier and more independent lives.

We're looking for people living in Royal Greenwich to join a new Resident Design Group that will steer the plans going forward, specifically those who have experience using care services, or supporting someone who does.

Participants of the Resident Design Group will:

- Meet once a month for an hour and a half to provide insight and feedback on the model
- Ensure that it meets the needs of residents and those being supported through health and social care
- Be reimbursed for their time with vouchers

We would like members to support the group for at least 12 months, however our intention is for the group to continue beyond the design of the service.
